

Asavie Moda: General Data Protection Regulations  
Protect the user, protect the device  
and protect the connection

A lot of IT departments are focusing on the data within their organisation. But there is nothing unusual about an employee using their smartphone or tablet to access customer or company data. With GDPR, for the first-time businesses really need to consider how they are protecting mobile devices.

**Asavie Moda helps businesses comply with GDPR by securing mobile devices and the data on those devices.**

**Network.** We protect the data on the mobile network, as we are already integrated into the carrier network. Our Mobile Threat Prevention works across both Cellular and Wi-Fi mitigating reputational risk and financial risk.

**Data.** We protect the data on the cellular and Wi-Fi mobile networks. We help employees demonstrate accountability by blocking access to apps and websites that are not data flow compliant.

**Device.** We physically protect the device with Password Protection/Lock/Wipe. Avoid sanctions by ensuring compliance on many types of devices: Smartphones, Tablets, Laptops, Routers, dongle, Mi-Fis.

**Insight.** Visibility is a key contributor to GDPR compliance. Asavie can help you understand what staff are accessing on their mobile devices, which helps you know what security solutions should be implemented.

#### Protect the device

Secure devices with password protection, and remote lock and wipe

#### Protect the connectivity

Block malicious content at source across both Cellular and Wi-Fi

#### Protect the data

Apply policies that help you adhere to regulations and company policies

#### Self Service

Simple deployment and management

#### Secure

Keep information and devices safe

#### Scalable

Quickly scale from one to many
