MODA
ASAVIE

Full Protection
for your Mobile Business

Asavie Moda enables your business to protect and control mobile device usage, aids compliance and mitigates financial risks. It is a cloud-based, self-service solution, helping employees to work efficiently and securely on any device across both cellular and Wi-Fi

Mobile Security

Manage risk by blocking inappropriate content and malware. Enforce compliance with internal corporate policies and assist mobile compliance capabilities for industry regulations such as GDPR and HIPAA.

Visibility & Control of Mobile Data

Transform data into advanced analytics with granular insight into mobile usage. Deploys easily through all UEMs (such as Microsoft InTune, VMware Airwatch, IBM MaaS360, MobileIron) for complete management of mobile data.

Productivity

Give access to business-critical applications from any mobile device. Drive productivity and increase revenue by applying policies on what each employee can and can't do online. Control access to work-related content and block access to non-work related content such as online gaming sites.

We Make Secure Connectivity Simple

DID YOU KNOW?

Security and Control

Through an intuitive, easy to use self-service portal, URG manages nearly 500 mobile endpoints. With knowledge of how staff were using mobiles, URG were able to calibrate the policies and plans appropriate for their business. With Asavie Moda URG has seen an 80% decrease in mobile data consumption per month and an increase in productivity with higher number of work orders completed.

An Integrated Managed Tablet Solution

Leeds Libraries deliver a fully managed tablet to its citizens using Asavie Moda to ensure only appropriate content is accessible on these public devices. Asavie Moda works as part of a holistic management solution together with IBM MaaS360 and Apple DEP.

Features

Asavie Moda is SIM-based, easy to use and automatically updates to ensure business conducted on cellular and Wi-Fi is always secure

Network Security

Stop malware and malicious content at the network layer before it gets to your device. Block unknown domains and stay protected from Zero-Day attacks.

Device and OS Agnostic

Manage mobile data on any Operating System and any device with a SIM including phones, tablets, wireless routers, SIM-enabled laptops, etc.

Advanced Reporting and Analytics

Expose attacks, vulnerabilities and inappropriate use. Enable fast decision making and implement the best solution to protect your valuable mobile data and devices.
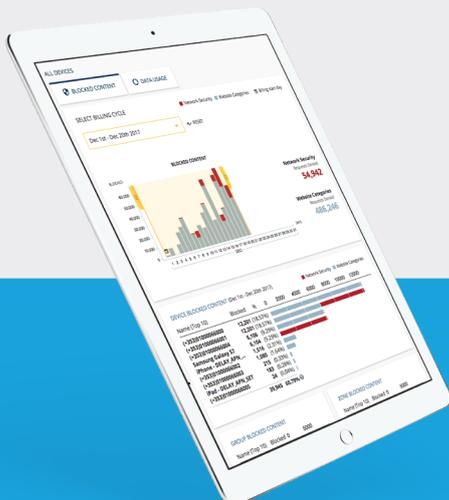

Content Filtering

Permit or deny access to 26 categories of website covering over 1 billion domains. For example deny "video streaming" covering services like Netflix and YouTube.

Data Usage Policies

Limit internet access speeds, set mobile data caps, block websites and apps at individual or group level.

Empower and protect your valuable company and customer data with this device agnostic mobility management solution
