

Powerful Management & Protection for your Mobile Devices

AccessMyLAN puts you in control to monitor, manage and protect all your mobile data and devices with one single and easy-to-use solution that scales with your business.

All-in-one Solution

Manage online risk by blocking inappropriate content and malware. AccessMyLAN offers network layer-based policy enforcement and is OS and device agnostic making it compatible with any SIM-enabled device.

Cost Control

With real time visibility of data usage, you can set up individual or group data limits and allow or deny access to specific content or apps to ensure you remain in control of monthly costs and worker productivity.

Private Static IP

A private static IP address adds an extra layer of security to your business. It ensures the device is not visible to attackers and only authorized users can access your device via a private network.

BENEFITS

- Protect your devices from the network down regardless of whether they are on cellular or Wi-Fi
- Prevent costly data breaches by blocking unknown or malicious websites and applications
- Keep staff productive by denying access to non-business content
- Real time monitoring of device activity allows you to optimize mobile use and counter any mobile security threats

Why AccessMyLAN?

- AccessMyLAN is an all-in-one mobility solution that is easy to set-up and easy to use.
- Full control of data traffic on all SIM-enabled devices means no blind spots in data security.
- AccessMyLAN takes your data off the public internet, keeping it safe even if the device is lost or stolen.
- Onboarding support included with no additional set-up cost.
