

Why do I Need a Private MPN?

Business Challenge:

Mobility is key to running a successful business, the challenge is to continuously protect the business in a world of evolving cyber threats targeting mobile devices and users.

What is an MPN?

An MPN or mobile private network, is a wireless network that is not exposed to the public internet. The effect is that all mobile devices and business data are invisible to cyber attacks.

Why Asavie?

Asavie provides private MPNs as a service, saving on the complexity of self-build and management. This allows businesses to focus on what matters - running a safe and trusted business.

How are Devices Protected?

Asavie's enterprise grade private MPNs are the standard Verizon MPN, offering the highest level of reliability, redundancy and security.

Asavie self-serve private MPNs provide:

1. Mobile authentication, securing access to the private network
2. Secure interconnects, to connect to enterprise networks or the cloud
3. Safe and consistent internet experience for all mobile workers
4. Visibility and policy management for device and data protection
5. Stops malware in the network from reaching mobile devices

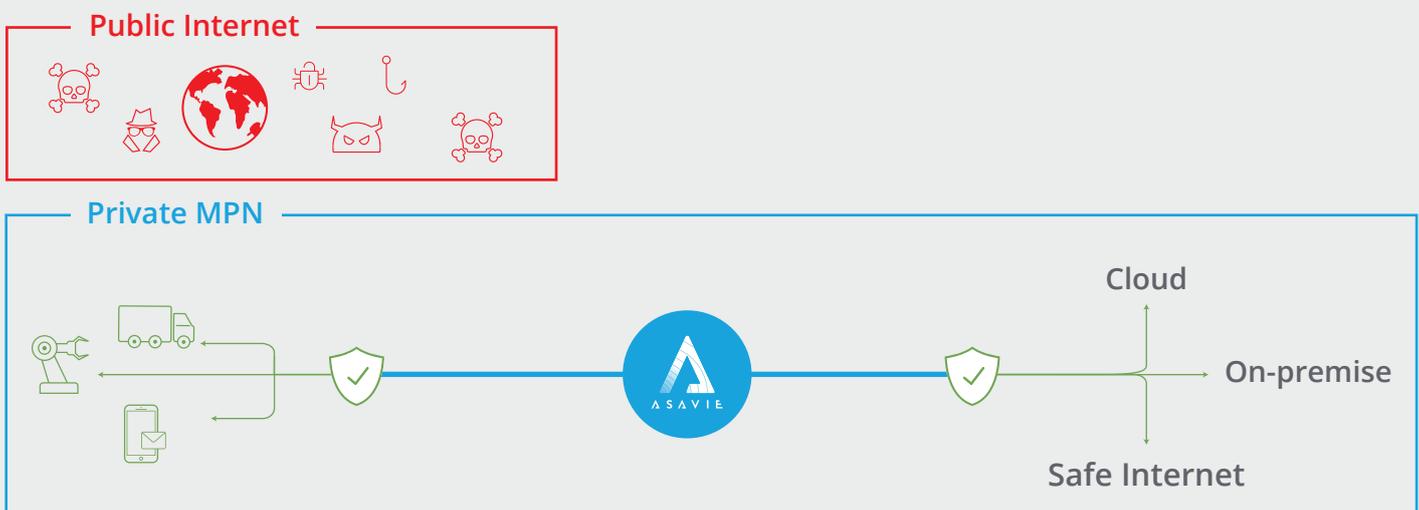

Figure 1: Asavie private MPN, securing all SIM based devices from cyber threats

Asavie uses machine learning to counter potential mobile security threats by continuously analyzing 500 million end-user behaviors and 100s of millions of websites per day in order to identify malicious actors and detect anomalies on your mobile traffic.

MPN vs Mobile VPN Clients

Asavie's private MPN affords greater protection than mobile VPN clients, all without the need for software on the mobile device.

Static Private IP Addresses

Get a scalable pool of private IP addresses, that are unreachable from the internet, at no extra cost.

Visibility and Control

Gain visibility into every byte of data that mobile devices send, increase productivity whilst lowering mobile expenditure.

Secure Remote Access

The bi-directional connectivity enables ease of access to devices for management and log collection.

Managed as a Service

Reduce IT burden with access to a support team dedicated to helping you succeed with your business connectivity needs.

Consistent Security

Protection for all SIM based devices e.g. Android, iOS, Jetpack Mi-Fis, tablets and cellular IoT use cases of routers and gateways.

Self-serve Portal

The intuitive web portal requires minimal IT skills, allowing business owners to manage mobility from anywhere.

Stay on Point

The Asavie private MPN allows you to focus on your business, without the worry or hassle of managing mobile security.
