

# Asavie Moda & VMWare Workspace ONE UEM

Asavie Moda maximises your investment in mobility and boosts enterprise productivity on a global scale.

Asavie Moda is a network-layer solution that integrates with VMWare Workspace ONE UEM to secure and control data on any type of SIM-enabled device. Its unique position on the network has many positive implications for IT and security teams within the enterprise, such as:

- It is an OS and agnostic solution that works on smartphones, tablets, Mi-Fis and routers alike, providing a consistent internet experience for all users within the business
- Asavie Moda gives IT admins a single pane of glass from where they can monitor and report on all their mobile data usage.
- It protects users on cellular and Wi-Fi networks so they are protected even if they need to access information from a café, airport or hotel.

## Visibility

Zero-gap visibility of all IP traffic that delivers unparalleled insights and improves the ability of IT teams to make decisions regarding usage policies and security.

## Control

Through the integration with VMWare, enterprises can extend their usage policies from the device into the network. This translates into extended compliance and productivity without distractions.

## Security

Asavie Moda removes data traffic from the public internet, putting it outside the reach of malicious actors. Its content categorization feature blocks unknown or unregistered sites that could trigger a malware attack or inappropriate content.

## Benefits

Protect your devices from the network down regardless of whether they are on cellular or Wi-Fi.

Prevent costly data breaches by blocking unknown or malicious websites and applications.

Keep staff productive by denying access to non-business content.

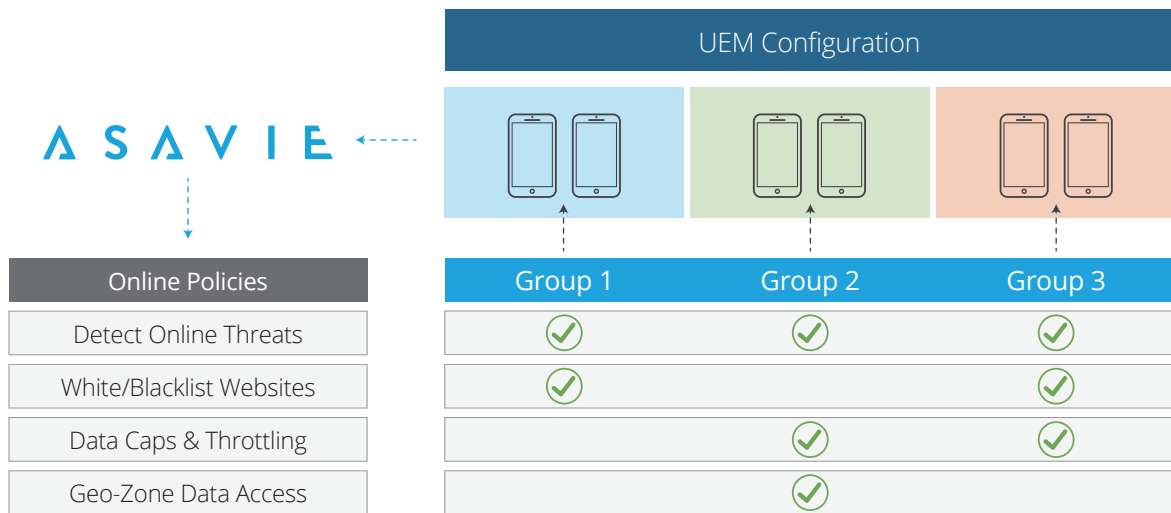

Real time monitoring of online behaviors to identify and counter mobile security threats.

## Asavie-Workspace ONE UEM integration

The integration between Workspace ONE UEM and Asavie Moda enables enterprises to extend their security policies to the network level and ensures all mobile devices are always kept in sync.

- Simply connect the two accounts
- Define your preferred policy mappings
- Auto-sync will take it from here minimizing IT complexity

## Deep Integration & Synchronization

Asavie Moda incorporates real-time visibility, control and security of mobile data in transit to and from any type of SIM-enabled device. Enterprises can now develop a comprehensive and consistent strategy towards managing the mobile internet experience of their employees.

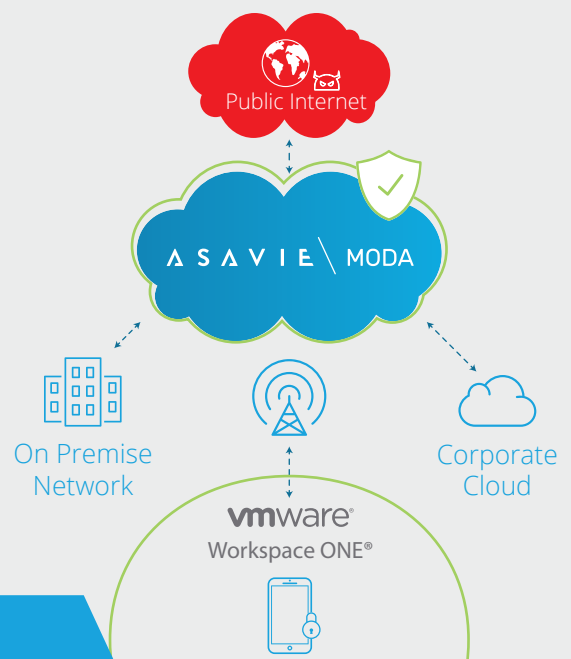

## Why Asavie Moda?

Asavie Moda is an all-in-one mobility solution that is easy to set-up and easy to use.

Full control of data traffic on all SIM-enabled devices means no blind spots in data security.

Asavie Moda takes your data off the public internet, keeping it safe even if the device is lost or stolen.

Asavie Moda connects to Workspace ONE UEM maintaining the solutions in sync, aligning policies and device ownership thus reducing complexity and improving mobile data visibility and control.
