AccessMyLAN
Keeping Mobile Data Safe

Companies recognize the productivity benefits of mobile working – hackers know the vulnerabilities. AccessMyLAN mitigates the risks for businesses by protecting mobile data.
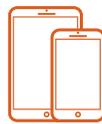

Compliance

Setting usage policies on a user-by-user basis keeps mobile data secure and aligned with company policies and regulatory requirements.

Threat Prevention

Proactive security stops attacks before they happen by blocking malicious content and malware at source.

Device Security

Password protection, remote locate, lock and wipe functionality ensures that company data is always secure, even when a device is lost or stolen.

accessmyLAN®

AccessMyLAN has a unique set of features that enable organizations to securely pursue their mobile strategies while fulfilling their compliance responsibilities.

A self-serve, network-based solution, it fills a gap left by MDM (Mobile Device Management) and more traditional security solutions.

Why Now?

Cyberattacks in the first half of 2019 targeting mobile devices rose by 50% compared with 2018.[1] – as cyber criminals attack the weakest link in an organization's perimeter - their mobile devices. Traditional security technologies and poor policy implementation have proved woefully inadequate in the face of increasingly sophisticated attacks.

Why AccessMyLAN?

Our pro-active SIM-based approach is unique - its continuously protecting your mobile devices and data by actively blocking access to compromised websites and malicious content.

Who Benefits?

Large enterprises that need a complementary service to fill security holes left by MDM solutions – one that also puts a ceiling on data costs and prevents overages.

Small-and-medium sized businesses that need a security solution that also allows them to control spiraling data usage.

Proactive

Blocks malware at source using machine learning to analyze threats from over one billion websites.

Compliant

At-a-glance dashboard ensures mobile policies are always aligned to company policies and regulatory requirements.

Insights

Understand how your mobile data is being used and help detect security vulnerabilities.

Multi-layered

Network and device monitoring ensure data content is controlled on a SIM-by-SIM basis, with remote locate, lock and wipe functionality for lost or stolen smartphones/tablets.

WIFI-ready

Works with Wi-Fi networks as well as cellular, which now accounts for 70-90 per cent of smartphone data traffic.

Self-service

Easily setup and administered without the complexity that undermines other security solutions.
