

Custom, Enterprise-Grade Smart Devices with Secure Connectivity Fit for your Business

Enabling the Digital Transformation of IoT and M2M for Enterprises and Integrators

We Understand Mobility

Mobility is not a luxury; it is the new norm for business. Enterprises across all industry sectors from health-care to transportation to public safety have specific requirements that call for a tailored approach that delivers flexibility, greater security, and affordability. We work closely with our clients to understand their needs and deliver a custom-built mobility solution to fit their business needs. This translates into real, tangible benefits to our customers from day 1.

We Deliver Real Value to Our Clients

We create end-to-end solutions for the mobile enterprise comprising of custom-built digital devices, firmware customization, and a network-based security service that provides private connectivity and keeps your mobile data safe at all times.

Choose Your Device

Choose from a growing list of JACS devices tested and pre-configured to work seamlessly with Asavie's AccessMyLAN. They are enterprise grade, firmware customizable, and have a long life cycle.

Customize Your Firmware

Take your solution further by having a customized Android or Windows operating system created just for you. JACS Solutions Firmware customization allows you to:

- Remove bloatware and other unwanted apps
- Install restricted apps in the system partition to avoid modification
- Customize Android system settings
- Create a custom OS launcher

Customize Your Hardware

Never compromise your vision when it comes to finding the right mobile devices to complete your solutions. JACS Solutions offers unmatched hardware customization to help you build the devices that are perfect for getting the job done. From modes of connectivity, operating systems, memory, form, ports, to casing, camera, accessories and branding, the possibilities of hardware customization are vast.

We Deliver Real Value

- We collaborate closely with our customers to understand their business needs and challenges.
- We design, manufacture, service and support products that are tailored to our clients' needs.
- We partner with the biggest and most trusted brands like Verizon and AT&T to deliver the best services to our customers.
- We provide a service that manages and protects the internet experience and data connectivity of every device in the field.
- We protect all mobile data against malware attacks, phishing and malicious content targeting our clients' devices.
- We provide enterprises with a zero-gap visibility platform & granular insights of all mobile traffic.

Industries we Serve

Transportation

Get road-ready products you can combine with your applications for a total solution—using electronic data logging, fleet management applications and remote resource management.

Healthcare

Harness remote patient monitoring that integrates with diagnostic medical platforms, with secured device firmware support for HIPAA compliance applications.

Manufacturing

Empower your manufacturing team with remote monitoring, mobile job site deployment and unified workplace collaboration to build a sound business.

Retail & Hospitality

Use our in-store devices to enable apps such as wayfinding, point-of-sales, customer loyalty program and more, to increase efficiencies and improve overall customer experience and loyalty.

Public Sector

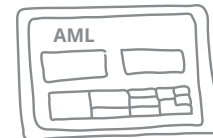

Employ our custom-tailored devices to improve important programs like Smart City initiatives, state and local school district projects, and meet TAA (Trade Agreement Act) compliance requirements at the federal level.

360° Visibility, Security & Control

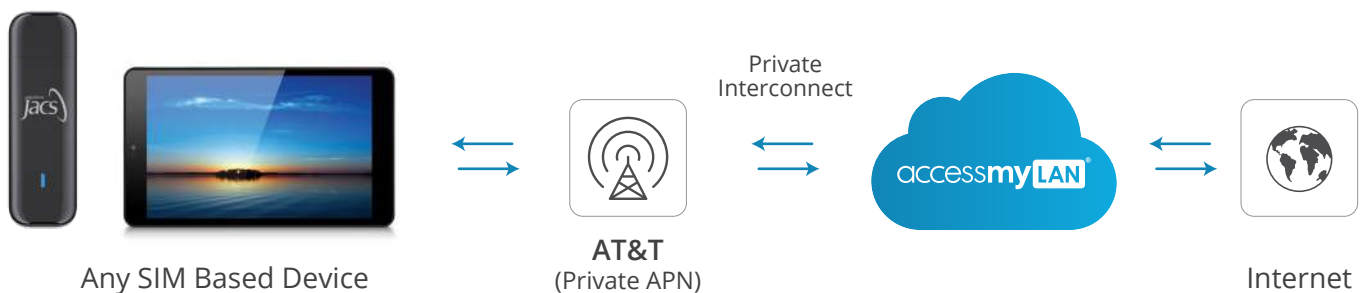

Protecting the Mobile Enterprise Against Cyber Threats Through Private Connectivity

AccessMyLAN offers a network-based mobility service to enterprises that provides visibility and control of all mobile data traffic and mitigates the risks of malware attacks by protecting mobile data on devices such as tablets and cellular dongles. We provide a service that can be deployed Over the Air (OTA) and switched on with a single button click. The service is flexible enough to adapt to your business rules while robust to protect your confidential data and ensure compliance with industry and government regulations alike.

AccessMyLAN Overview

- Domestic & International Control for any device with a SIM
- All Anonymizers/Malicious/Unknown Sources blocked
- Private Network Transport over AT&T Network
- Content Filtering/Custom Policies of the entire world wide web & applications
- WIFI protection to protect against man in the middle attacks
- Over the Air deployment; no end user interaction needed.
- MDM/UEM compatible creating a complete security ecosystem.
- Private Static IP and Routing for all your connectivity needs

Architecture

Secure & Control your Mobile Devices Globally

Visibility

Transform data into rich actionable insights with granular visibility of all traffic both accessed and denied. With detailed reporting on data traffic by individuals and groups, zones and usage categories you can make informed decisions about usage policies in real time.

Productivity Management

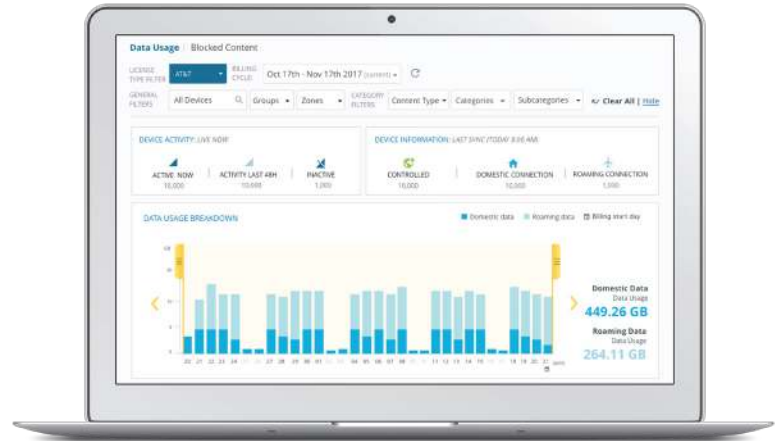

Give access to business-critical applications from any mobile device. Drive productivity by applying policies on what each group can and can't do online. Control access to work-related content and block all other content such as online gaming sites or media streaming services.

Mobile Security

Manage risk by blocking inappropriate content and malware. Enforce compliance with internal corporate policies and assist mobile compliance capabilities for industry regulations such as GDPR and HIPAA.

Consolidated Policy Management

Align and enforce the application of group policies from the UEM solution and AccessMyLAN to visualize and control all your mobile devices from one single pane of glass. Streamline the management of users and devices to reflect organizational changes.

Compliance

We take security and regulatory compliance seriously. We have implemented the strictest industry security best practices to ensure our services are built to meet the most rigorous standards.
