# Safe Distance Learning for K-12 Schools

The shift from busy classrooms to distance education has exacerbated the learning challenge for many disadvantaged students. They often lack access to the tablets, laptops and broadband connectivity essential for elearning. Now more than ever, we need to bring learning opportunities to students everywhere. But we must do it safely.

AccessMyLAN is a management and security solution for mobile devices that is fully compliant with the Children's Internet Protection Act (CIPA). It gives teachers and their students a safe environment where they can make the most of elearning technologies on any SIM-enabled device.

By managing access to content and applications, schools can ensure that children only use devices for educational purposes. Crucially, malicious sites, malware and hacking attempts are blocked at the source.

*AT&T is committed to finding innovative ways to support educational institutions during this public health crisis. Combining AT&T and Asavie's technologies ensures that K-12 students are connected and protected while studying remotely.*

## Security & Compliance

Stay ahead of the game. Protect students from the dangers of the internet. Ensure your devices are safe on both cellular and Wi-Fi networks. Safe internet policy enforcement ensures your school remains compliant with CIPA.

## Productivity

Make the most effective use of mobile technology. Provide access to the content and apps you want students to use, and block any websites or apps that are inappropriate or distracting.

## Visibility

Gain 360-degree visibility of all internet traffic on mobile devices on cellular and Wi-Fi networks. See where, when and how your data is being used. Benefit from valuable data insights with rich reporting.

## Why AccessMyLAN?

AccessMyLAN is the all-in-one mobile device management solution for schools. It provides a tailor-made internet experience for educators and students.

### Strong Data Security

AccessMyLAN is a network-layer service, meaning it provides protection against malware, phishing and man-in-the-middle attacks before they reach devices.

### Any Device or Operating System

You can choose the smartphone, tablet or Wi-Fi hotspot that best suits your needs in delivering high-quality educational content to your students. AccessMyLAN works on every device and operating system.

### Cloud-based Safety

AccessMyLAN is a cloud-based solution so it doesn't require hardware or upfront capital expenditure.
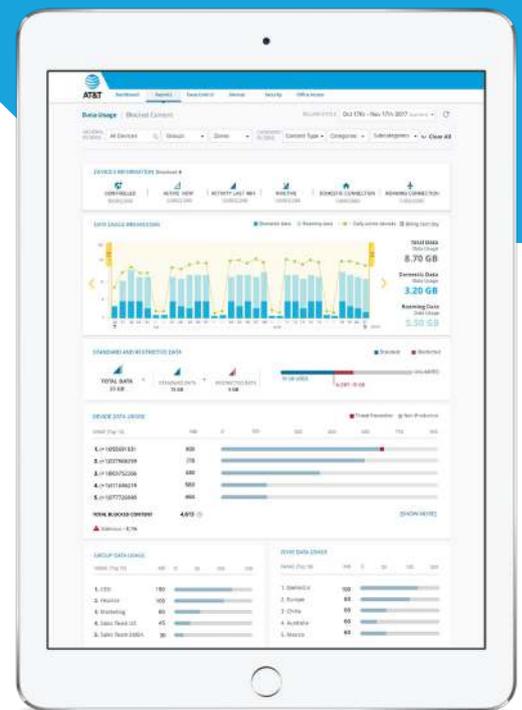

## BENEFITS

Empower students to adopt cutting-edge educational tools in a safe environment.

Give students access to educational content and apps wherever they are.

Reduce online distractions and boost the learning experience.

Understand how students use the internet as part of your educational program.

Asavie meets the most rigorous industry security standards.
