

ASAVIE

Branch of One®

Securing the Office Anywhere

The way we work has dramatically changed. The future office is "anywhere" employees work, collaborate and are productive. Enterprises now require a holistic approach to protect employees and secure access to business resources and applications from anywhere.

The 'Office Anywhere' with Asavie Branch of One®

Asavie Branch of One delivers the office anywhere the employee needs to work and collaborate. The Branch of One protects employees when connecting to the internet. It is also used to extend the enterprise's private network and resources to the employee through a mobile device.

With the Branch of One, enterprises can evolve and deliver secure and productive work environments to their employees without the hassle and constraints of cumbersome Virtual Private Networks (VPN) or Customer Premise Equipment (CPE). This frees employees to be productive outside the office, in the home or on the move.

Features

- **A no-bypass security** solution, as the service is tied to the enterprise mobile SIM connection and a private Access Point Name (APN).
- **Private mobile network** on demand for all employees, with secure access to the enterprise private resources and secure internet free from cyberthreats, spam, and phishing.
- **Quickly connect employees** to office networks, private data centers, or cloud applications with over-the-air provisioning.
- **Works on all mobile devices** without the need for software clients, saving the employee from having to deploy and manage equipment.
- **Self-serve** security and connectivity management, includes integrations to enterprise MDMs/UEM, for zero-touch by the employee.
- **Visibility and control** with a single pane of management for all work from anywhere employees, full visibility of all mobile traffic.

Challenge

Employees are now spending significant time outside the office. Enterprises need to protect employees and secure access to business resources and applications on any device from "anywhere" and not just from the employee's home.

Asavie Branch of One®

Branch of One enables an office anywhere by delivering secure, frictionless access to all business resources, with full mobility. This can be done quickly and easily from a single user to large teams.

Benefits

Protection Everywhere

Protection against cybersecurity attacks for the office anywhere with network-based security tailored for the enterprise.

Frictionless Access

Allow employees to access business resources without the costly overhead of cumbersome customer equipment and clients.

Anywhere Productivity

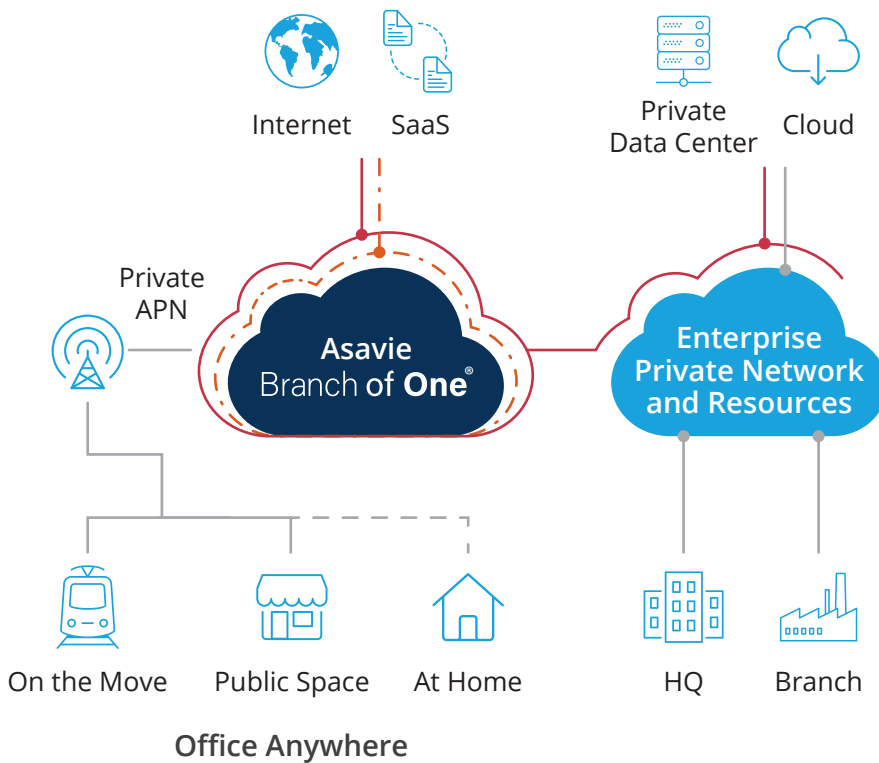

Employees can be productive outside as inside the office, with no compromise on security and compliance.

Simple to Deploy

With over the air provisioning, minimizing employee involvement in setup.

Securing the Office Anywhere with Asavie Branch of One®

Asavie Branch of One gives every enterprise their own private mobile network. Asavie has a private APN interconnect to the mobile operator's packet gateway, and each enterprise gets an individual slice. Through Asavie's self-serve white-labeled portal, enterprises get full visibility and granular controls of their mobile estate security policies. The Branch of One is available in two options: Asavie SD Mobile provides secure internet and Asavie SD Edge extends the enterprise private network to the enterprise mobile estate.

ASAVIE SD Mobile

- Protection from mobile malware and phishing attacks
- Tailored secure internet experiences per employee
- Self-serve, visibility and control of all employee traffic
- Ecosystem integration to leading MDM / UEM / SIEM / IAMs

ASAVIE SD Edge

All the capabilities of Asavie SD Mobile, plus:

- Multiple private networks per enterprise
- Private static IP addressing, routing and IP ACLs
- Ecosystem integration with leading SD-WAN, ZTNA & CASB vendors

Why Secure the Office Anywhere with Asavie Branch of One®?

Protection Everywhere

Protection against cybersecurity attacks for the office anywhere with network-based security tailored for the enterprise.

Frictionless Access

Allow employees to access business resources without the costly overhead of cumbersome customer equipment and clients.
