Asavie SD Mobile™

Secure Internet Fit for the Mobile Business

Key Advantages of Asavie SD Mobile™

- ☑ Visibility and control of all mobile data traffic across both cellular and Wi-Fi networks.

- ☑ Scalable solution that integrates with all leading UEM products for multi-layer device protection.

- ☑ Tamper-proof solution that retains the service profile in the SIM even if this is removed from the device.

- ☑ Minimal effort required to deploy to any kind of SIM-enabled device.

Extensive integration with UEM vendors:

IBM **MaaS360**

■ Microsoft Intune

vmware®
Workspace ONE®

* VMWare Airwatch is now powering Workspace ONE UEM

Secure & Control your Mobile Devices Globally

Mobile Security

Manage risk by blocking inappropriate content and malware. Enforce compliance with internal corporate policies and assist mobile compliance capabilities for industry regulations such as GDPR and HIPAA.

Visibility

Transform data into rich actionable insights with granular visibility of all traffic both accessed and denied. With detailed reporting on data traffic by individuals and groups, zones and usage categories you can make informed decisions about usage policies in real time.

Productivity Management

Give access to business-critical applications from any mobile device. Drive productivity by applying policies on what each group can and can't do online. Control access to work-related content and block all other content such as online gaming sites or media streaming services.

Consolidated Policy Management

Align and enforce the application of group policies from the UEM solution and Asavie SD Mobile™ to visualize and control all your mobile devices from one single pane of glass. Streamline the management of users and devices to reflect organizational changes.

Features

Asavie SD Mobile™ offers an enhanced mobility service to enterprises to support the management and protection of devices and data in transit on a global scale. Asavie SD Mobile™ enables customers to roll out the service without the need for time consuming integrations with local operators.

Multi-operator Availability

Deliver a consistent internet experience and policy enforcement across your fleet of smartphones and tablets regardless of the operator network (*).

(*) Asavie SD Mobile™ delivered via public and/or private APN

Network Security

Stop malware and malicious content at the network before it gets to your device and mobile applications. Block unknown domains to stay protected from zero-day attacks.

Advanced Reporting & Analytics

Enable fast decision making and implement the best solution to protect your valuable mobile data and devices. This enables you to expose threats, detect vulnerabilities and prevent inappropriate use.

Content Filtering

Permit or deny access to 165 categories of websites covering over 1 billion domains. Deny video streaming services such as Netflix and YouTube. Ensure devices are used for the purpose they were issued to optimize the productivity of your mobile workforce.

Data Controls

Customize the internet experience of individuals and groups. Limit internet access speeds, set mobile data caps at individual or group level. Create zones to tailor the policies based on where the employees are travelling. Support compliance with personal data regulations that have global reach such as SOX, HIPAA or GDPR.

> "Once Asavie SD Mobile™ is configured, it just works. We don't have to login regularly to manage the service. The weekly summary emails show us all we need to know about existing to anticipated usage.

ASAVIE **SD** Mobile

Professional Services

Asavie SD Mobile™ can be deployed for SIM-enabled tablets to monitor heavy data-users consumption and productivity. The solution also enables the seamless rollout of group policies to support compliance with GDPR for their European customer base.

Emergency Services

Dedicated secure mobile connectivity for first responders' communications. Asavie SD Mobile™ provides an easy way to configure and manage the mobile device fleet with dynamic policy enforcement for SIM-enabled devices including in-vehicle routers and ruggedized devices.

Field Force

Asavie SD Mobile™ can help identify time-wasting websites and services and block them to improve productivity and reduce distractions during working hours. The device security features help locate misplaced or stolen devices and wipe all data from the device should the information become compromised.

Global Sales

IT admins can set customized data caps for international travelers with flexible rules before and after the data cap is reached so that sales teams and individuals can always have access to the relevant business applications to do their job without distractions while ensuring mobile data costs are kept under control.

About Asavie

Asavie successfully addresses the evolving productivity, mobile security and compliance challenges encountered by many of the world's leading businesses. The Asavie SD Mobile™ solution is an innovative business mobility service integrated into the telecoms' core and billing systems of Tier 1 operators in North America, EMEA and APAC, to deliver an unrivalled private network-based service for SIM-based devices across cellular and Wi-Fi networks.
