

# Delivering safe mobile technology for educational institutions

A successful online educational model requires school IT departments to provide staff and students with mobile devices, connectivity, and a safe learning environment. This includes safe access to online learning platforms and communication tools.

## Overview

SPS Secure Mobile is a Children's Internet Protection Act (CIPA)-compliant management and security solution for mobile devices. It is designed to provide a safe environment for teachers and students to maximize the benefits of new technologies on any SIM-enabled device. By managing access to content and applications, schools can help ensure that devices are used for educational purposes only. Crucially, malicious sites, malware, and hacking attempts are blocked at the source.

## Features

**Visibility:** Get 360-degree visibility of all internet traffic on mobile devices on cellular and Wi-Fi networks. Gain valuable data insights with rich reporting; see where, when, and how your data is being used.

**Security and Compliance:** Protect students from the dangers of the internet and ensure school-owned devices are safe on both cellular and Wi-Fi networks. Policy enforcement designed to assist your school in remaining compliant with CIPA.

**Productivity:** Provide access to the content and apps you want students to use and block any websites or apps that are deemed inappropriate or provide a source of distraction.

## BENEFITS FOR YOUR BUSINESS

-  **Monitor usage in real time.** SPS Secure Mobile provides schools with the ability to monitor usage to ensure students are using the devices for learning purposes. The reporting capabilities can also drill down into specific sites and applications to guide policy setting.
-  **Network-based security** helps protect students from malicious actors and inappropriate content while assisting schools to remain compliant with the relevant child protection regulations.
-  **Make the most effective use of mobile technology.** With SPS Secure Mobile, schools can customize the type of content students can access from their devices to maximize the learning experience within a safe environment by removing online distractions, such as streaming and games.
